

PENNINGTON

GREEN AGENT™

15-25-05

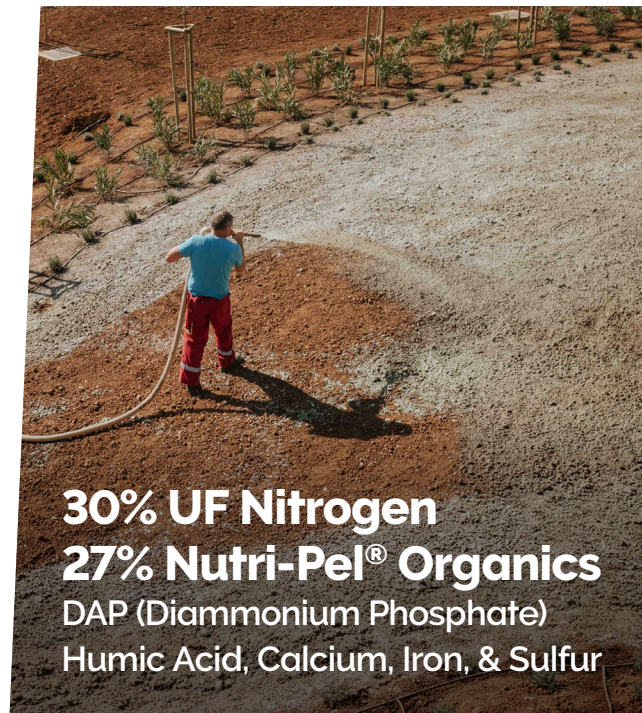

Pennington's newest solution creates the highest quality fertilizer offering in the construction industry. Unmatched in agronomic products for hydraulic seeding, Pennington's "Green Agent" is a new erosion control effort to bridge the gap between agricultural fertilizer products ill-suited for hydroseeding and expensive, cutting edge turf and ornamental fertilizer. The result is a unique, best-of-both-worlds product with distinct advantages for the construction market.

KEY BENEFITS

- Fertilizer blend contains no urea sources. This prevents fertilizer loss and seed die-off from urea off-gassing
- No filler reduces blend's particle size for reduced abrasion to hydraulic pumps
- Filler is replaced with a cutting-edge Nutri-Pel organic source for a more natural feeding + addition of essential micronutrients
- Water-Insoluble UF Nitrogen prevents up 30-40% of nitrogen in-tank solubility and immediate dispersion leaching upon application vs. common urea-based blends
- UF (Urea-Formaldehyde) is broken down by microbial activity, slowing down the nutrient release curve to better feed the plant during critical growth stages
- Nutri-Pel organic filler replacement contains 85% water-insoluble nitrogen and 1.5% Fe in a standard turf SGN size
- Nutri-Pel® contains Humic Acid, Calcium, and Sulfur necessary for seedling growth

SIZE | **APPLICATION RATE** | **COVERAGE**
50 lb bag | 200 lb minimum per acre | 11,000 sq. ft.
