

SolaMist Pro Concentrate

Directions:

Insect Misting Systems:

For all natural control of mosquitoes, spiders, wasps, hornets, gnats, midges, no-see-ums, and other crawling, and flying insects fill SolaMist unit 3/4 full with water FIRST then add 4 ounces of SolaMist Pro Concentrate. Top off unit with water to make a 12 gallons of mixed solution. This will prevent excessive foaming during fill. For larger 55 gallon systems follow previous instructions and add one 16 ounce bottle of SolaMist Pro Concentrate to make 55 gallons of mixed solution. Set spray times when targeted pests are most active.

Spiders - spray 2-3 times per day, 10 pm, 1 am, 4 am. Set spray duration for 45 - 60 seconds each.

Mosquitoes - spray at dusk and dawn for 30 - 60 seconds and manually as needed.

Depending on severity of infestation and type of pests additional spray times and duration may need adjusting to achieve the level of control you desire. Mist daily during targeted pests season.

Ensure nozzle placement and spray duration is adequate to thoroughly wet targeted pests. Place nozzles on eaves, around sitting areas, in foliage or wherever pests are present outdoors.

Pump Up Sprayers & U.L.V. Foggers:

Fill container 3/4 full then add dosage, listed below, for specific areas of use followed by topping off container with water to minimize foaming.

Indoors - add 1-2 ounces per gallon and apply in cracks & crevices, plumbing entries, baseboards, entryways, window frames, where pests exist.

Outdoors - add 2-4 ounces per gallon and apply around foundation one foot up wall and one foot out on soil perimeter, cracks & crevices, thresholds, doorways, windows, foliage, lawn, where pests exist. One gallon of mixed solution treats approximately 5,000 sq. ft. Reapply after first application in two weeks then every 30 days, thereafter, or as needed.
