

PRODUCT FACT SHEET – NATTARO SCOUT

PRODUCT DESCRIPTION

Nattaro Scout is a bedbug trap with patented lure and design protected innovative design. Use the traps for early detection in low level infestations and for ongoing monitoring. The lure mimics the natural smell of a bed bug harbourage (aggregation), and attracts all motile life stages.

USAGE

Use indoors to capture bed bugs
Always check Best Before Date of lure before use.

EFFICACY

The lure attracts bed bugs for 3-4 weeks in normal room temperature (20-22°C)

MATERIAL

- Trap and holder are made of certified GMO-free and biodegradable plastic
- Lure consist of gelling agents and synthetic fragrance materials
- Protective silver bag is made from a laminate of PP/PE/PET
- Capsule is made of PET
- Protective sticker is made of PP with a permanent rubber-based adhesive
- Cardboard is made of acid-free paper
- Package label is made of coated paper

STORAGE

Store traps in dry environment at normal room temperature. Lure can be stored in normal room temperature up to 1 month. Long term storage of lure is in a refrigerator (4-8°C).
Do not freeze the lure.

REUSE

Clean used traps following a catch at -18°C for 48 hours. If required, clean with lukewarm water (<40°C).

WASTE DISPOSAL

The transport box is recycled as cardboard.
Outer packaging without labels are recycled as paper.
The trap, silver bag, protective sticker, labels and capsules with remaining lure are sorted as combustible residual waste.
Empty capsules sorted as plastic.

WARNING

The lure contains 2-hexanone which can cause allergic reactions in direct contact, see Material Safety Data Sheet.
Keep away from children and pets.
