

SynerPro™ PBO

INSECTICIDE SYNERGIST

- SynerPro™ PBO contains the active ingredient Piperonyl Butoxide.
- SynerPro™ PBO can be utilized in ground application sprayers, handheld sprayers, power sprayers, foggers, ULV applicators, or by chemigation.
- SynerPro™ PBO is intended for tank mixing with Pyrethroids, Carbamates, Abamectin, and most other insecticides.
- SynerPro™ PBO can be used in residential dwelling or indoors in commercial or institutional buildings (including food processing and handling areas), turf and ornamentals, crops (including greenhouses and nurseries), on livestock, and livestock housing.

SynerPro™ PBO is an emulsifiable concentrate for use as an additive in insecticides and acaricides to improve efficacy on insects and mites.

SynerPro™ PBO increases the rate of eliminating pests, and aids in getting the ultimate control from pyrethroids and most other insecticides.

As a synergist in a tank mix, SynerPro™ PBO blocks metabolic systems that would otherwise break down insecticide molecules. SynerPro™ PBO interferes with the detoxication of insecticides by insects, a resistance management process directly related to an enzyme-inhibiting action. SynerPro™ PBO, therefore, restores the vulnerability of insects to the chemical which would otherwise require higher levels of a toxicant for their control. On its own, SynerPro™ PBO has no insecticidal effect.
